

CPC #18: Implantable Hardware in a 5G World

Many trauma patients require implantable hardware for treatment of their spinal and bone injuries. One of the concerns patients frequently raise is whether this **may cause a problem at TSA airport screening checkpoints (Transportation Safety Administration)**.

The answer in the past was probably “yes” because screening used more metal detection and less RF scanners. If you travel into a country like Mexico regularly as I do, metal detection is still the defacto screen because it is cheaper than the new RF scanners used in the USA and EU.
