

# HYPOXIA #8 : WHAT IS THE REMEDY FOR COVID-19? THE TRUTH.

## The Cutter Incident

With the development of the Salk polio vaccine, a controversy arose when bacteriologist Bernice Eddy, a researcher at the National Institute of Health (NIH), used a batch of the vaccine on her monkeys; they fell paralyzed in their cages. Eddy realized that the virus in the vaccine was not dead. Eddy sent pictures of the monkeys to NIH's management and warned of an impending tragedy. A handful of prominent physicians stepped into the controversy on the side of the Salk vaccine. Among those physicians was Alton Ochsner, who had invested in Cutter Laboratories, one of the vaccine's producers; he inoculated two of his own grandchildren. His grandson died after seven days; his granddaughter was infected by polio but survived. This was a devastating experience for Dr. Ochsner; 1955 was not kind to him. And 1956 brought the end of Alton Ochsner's Chairmanship in Surgery; the claim was made that he was spending so much time at his clinic, he was not properly addressing his chair duties. Ochsner fought this decision bitterly, but to no avail. In 1961, Ochsner was subject to mandatory retirement at the Tulane Medical School; though Ochsner fought the process, he was unable to get around this obstacle.<sup>17</sup>

Ochsner was, in 1963, an even more complex man. Ochsner had become an adamant anti-communist; like many of his wealthy Southern patients, his politics could be described as ultra-right-wing. While he had earlier been involved with the FBI in classified research activities, they allowed Ochsner to conclude his relationship with them (in 1959) in order to work with another government entity (most likely the Central Intelligence Agency).<sup>18</sup>

his team of medical scientists would clearly be in the medical arena. It would seem likely that they would be enlisted in developing a biological weapon to incapacitate Castro. Perhaps considered were either poisoning or infecting him with a disease that would quickly disable him. As it happened, Dr. Ochsner and his associates were proficient working with cancer and its cure. Perhaps they could change their direction to developing a fast-acting cancer, and coincidentally, also learn how to stop it. It's just that, in Castro's case, the last part wouldn't be necessary.

It is known through the testimony of CIA Director Stansfield Turner that the CIA funded 159 medical research centers to do classified medical research. It is highly likely that one of these centers was Alton Ochsner's facility.<sup>19</sup> It was shown by Ed Haslam that Ochsner's team had access to a particle accelerator.<sup>20</sup> In most cases, the information on the particle accelerator had to be meticulously documented, but apparently not for secret research being conducted through the CIA.<sup>21</sup> In fact, Haslam has gone to great lengths to show the existence of a particle accelerator in New Orleans, and the likelihood that the accelerator was involved in the mysterious death of Ochsner close associate, Dr. Mary Sherman. Prior to Haslam's research, the existence of a particle accelerator (LINAC) was covered up.<sup>22</sup> It is most likely that the accelerator was already installed prior to the beginning of the project. Dr. Ochsner received millions of dollars in donations from right-wing oil millionaires who despised both John F. Kennedy and Fidel Castro.
