

# QT #21: Does Mitochondrial Water have a memory?

You do recall that mitochondria make water, don't you?

Can water have a 'memory' of its previous solutes, environment or processing?

On the surface, this question sounds like quackery and pseudoscience. But the Black swan will go deeper than most to examine the evidence for themselves as the video above shows.

Montagnier experiments showed the effect. But he still has no idea how it happens. Today I am going to share with you how I think it does happen in your cells.
