

Trigeminal and Glossopharyngeal Neuralgia

Are all cranial nerve neuralgia's a manifestation of a brain stem redox deficit?

I think they are. I think all pain syndromes are linked to a lack of redox caused by an inability to maintain your redox potential in your CNS and PNS at some level.

The cell membranes in the cranial nerve nuclei and brain stem nuclei share a blood supply. They are located in close proximity and receive input from the retinal pathways and from the skin surfaces.
